STUDENT / START

Help starts here.

A floor and a help type get the request started. Add a block only if you know it.

Location first

Large floor choices on the opening screen.

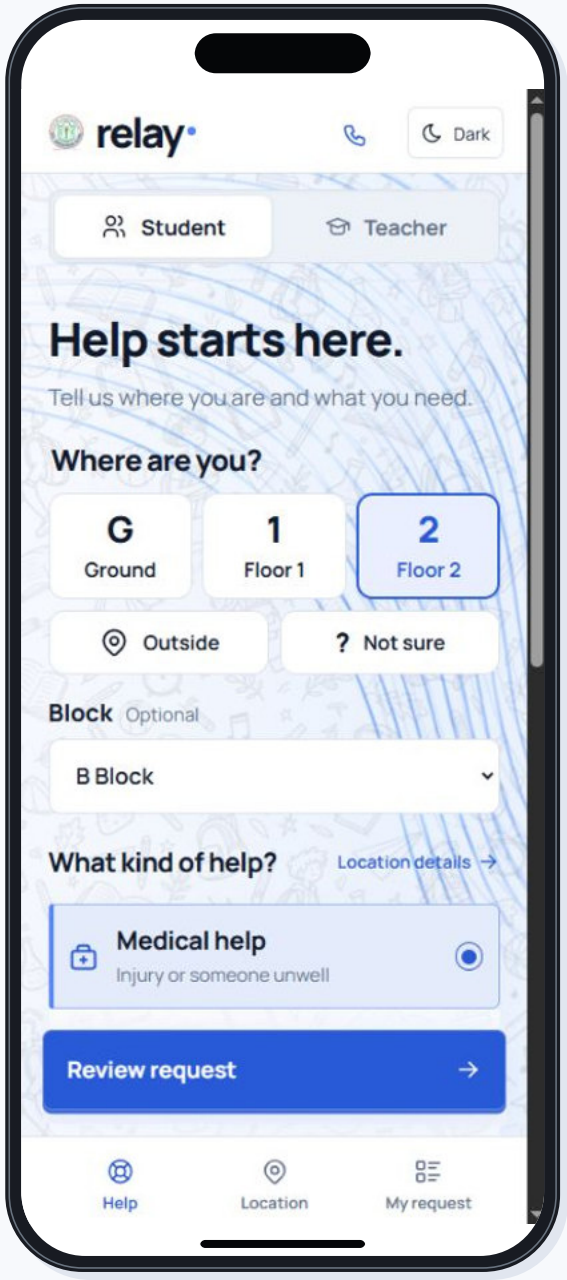

Your school, your words

Choose A, B or C Block. “Not sure” stays available.

01 / HOME

02 / LOCATION

STUDENT / REQUEST

A clear next step.

Check the help type and location, then follow the response.

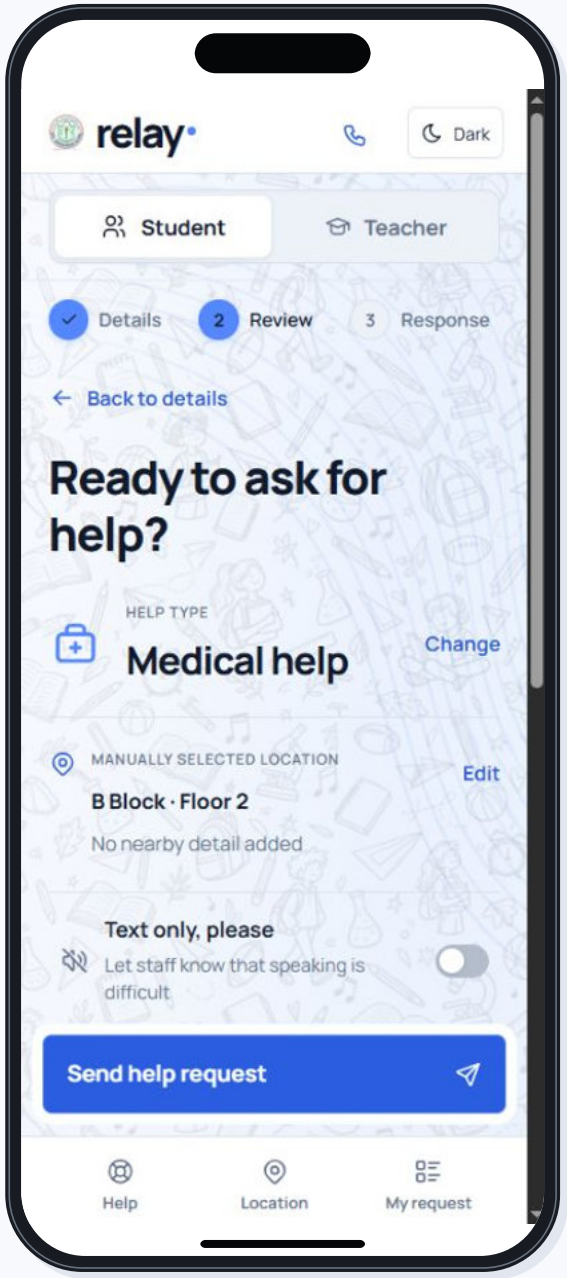

Easy to change

Back and Edit preserve the choices already made.

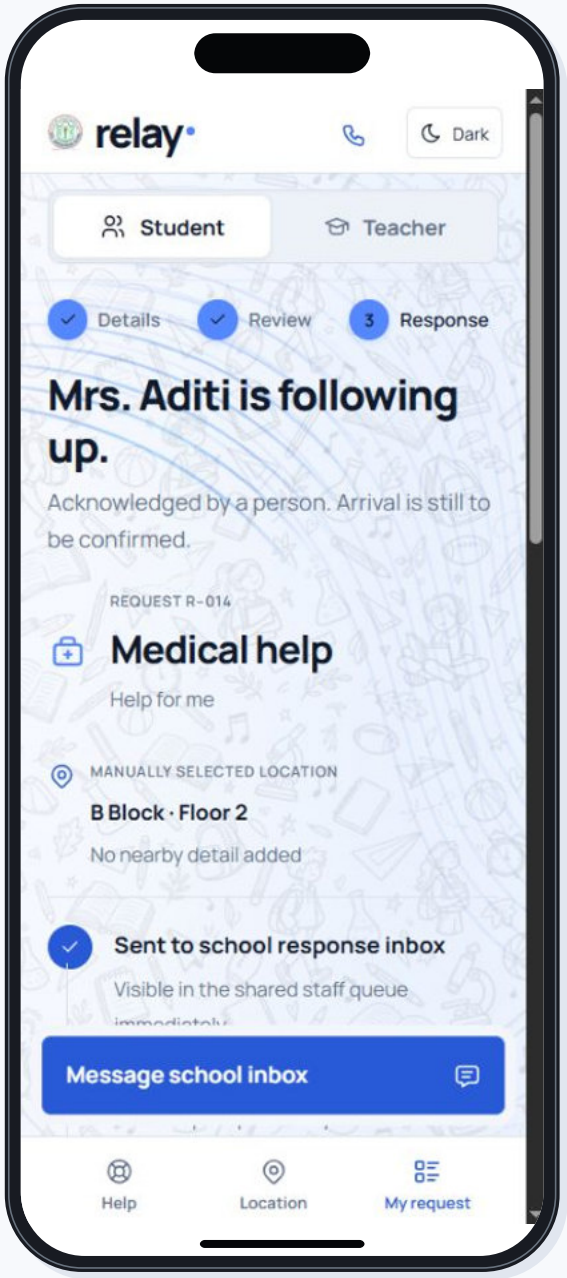

Clear status

Delivery, acknowledgement and arrival are separate states.

03 / REVIEW

04 / STATUS

STUDENT / CONNECTION

Keep the connection.

Use text when speaking is difficult. Close the request once a responsible adult is there.

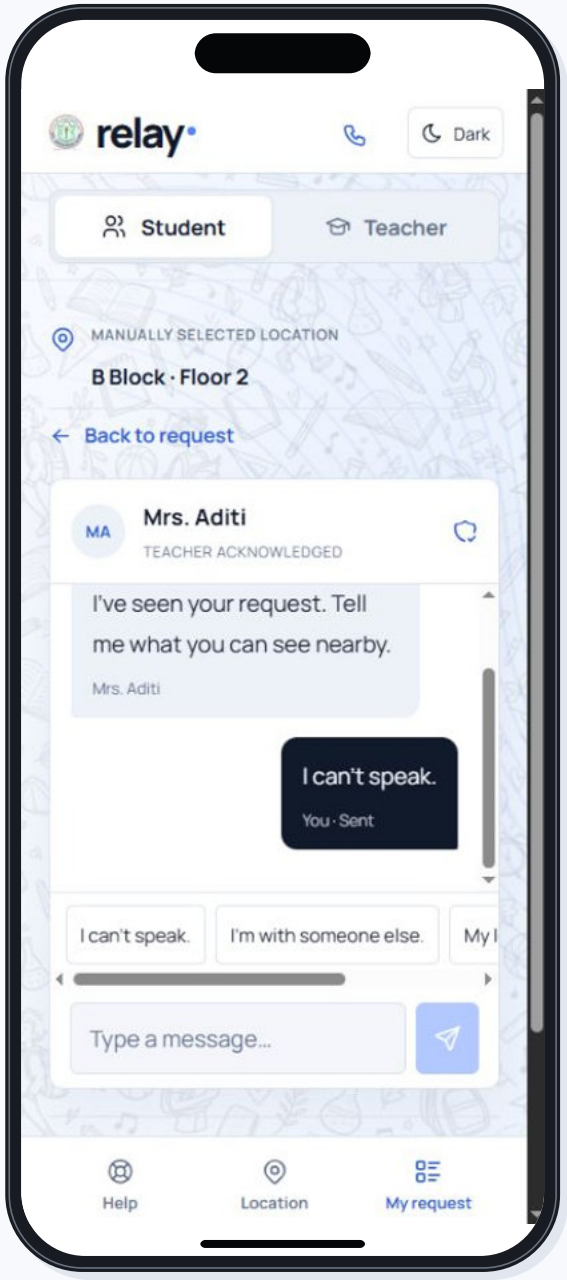

A quiet way to ask

Quick replies and messages work before acknowledgement.

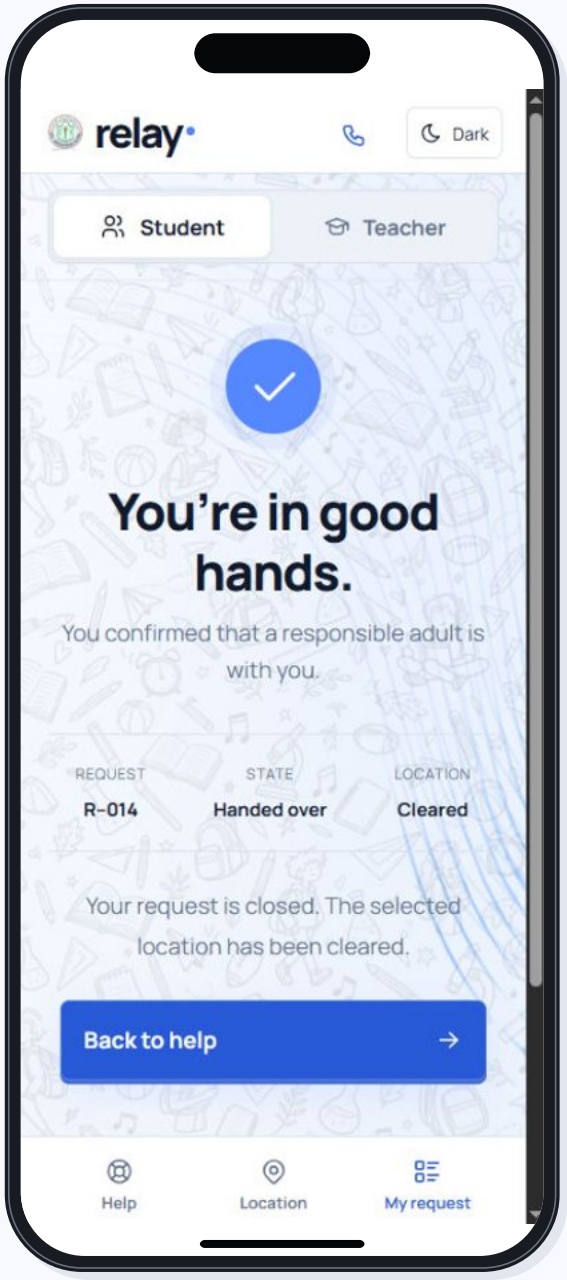

Confirmed handover

The student closes the request after meeting an adult.

05 / CHAT

06 / HANDOVER

TEACHER / RESPONSE

The other side of help.

The shared inbox receives the request immediately. Mrs. Aditi can acknowledge and reply.

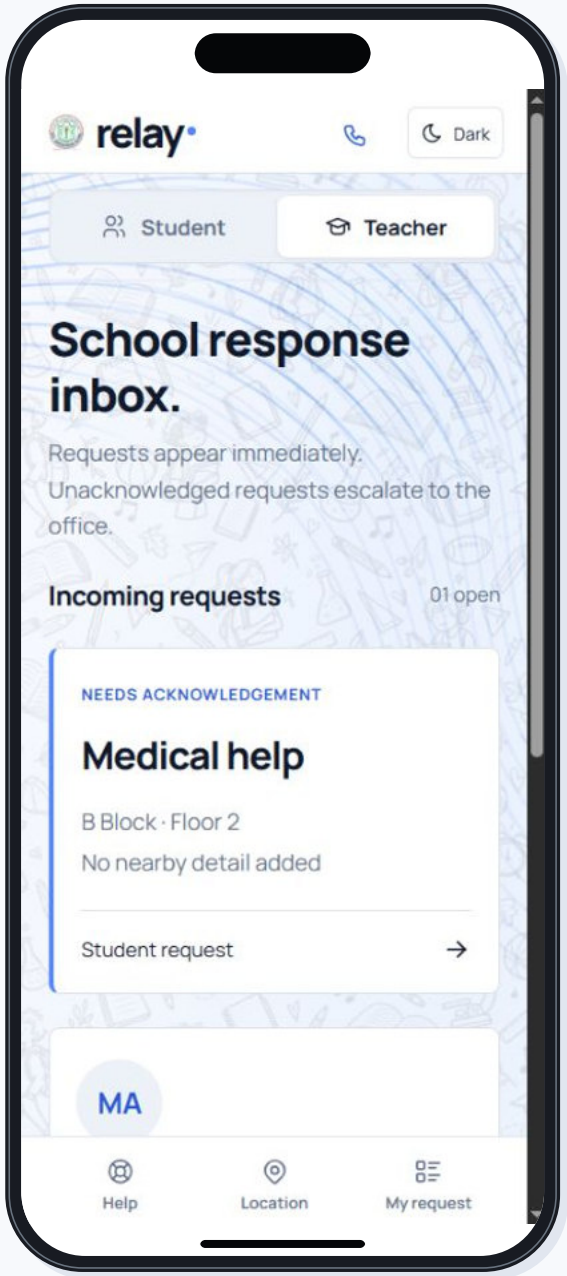

Shared responsibility

An individual accepting is not a condition of delivery.

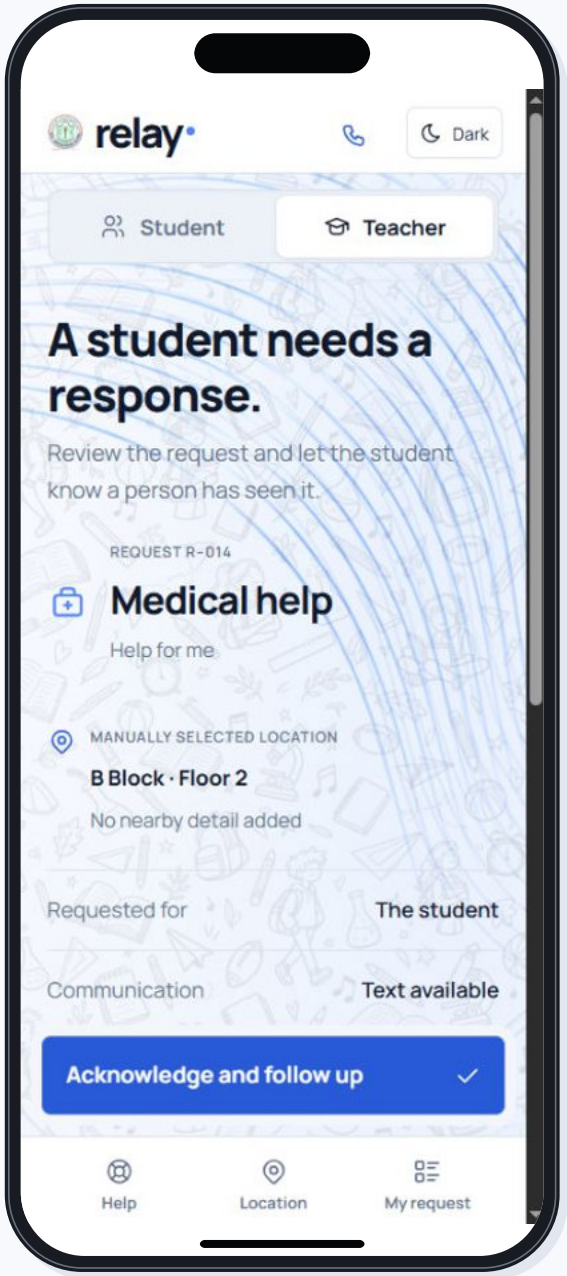

An explicit channel

A ping goes to the in-app inbox. The contact is from the school directory.

07 / INBOX

08 / FOLLOW-UP

RELIABILITY / EDGE CASES

When help is still pending.

An unanswered request triggers follow-up. A connection failure stays visible.

30-second escalation

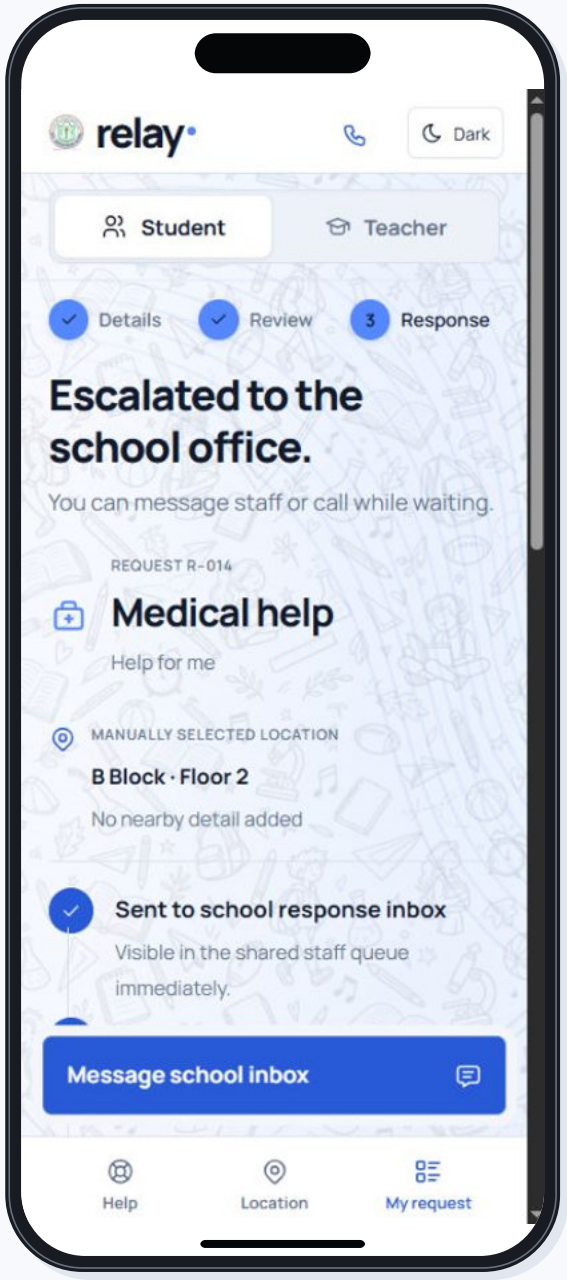

The prototype adds an office escalation if nobody acknowledges. Escalate now is also available.

Unsent stays unsent

Keep the details, retry or use the direct-call options.

Requests, pings and office escalation are simulated. Live delivery and the timing policy require school approval.

09 / ESCALATION

10 / CONNECTION LOSS
